- .NET / C#
- ASP.NET
- T-SQL / PL-SQL
- Javascript / Typescript
- Microservices
- DDD

RELATED WORK EXPERIENCE

Software Developer / Contractor

2014 -

Civica UK | Manchester / Remote

During my tenure as a contractor for Civica over the span of several years, I held the role of lead developer for multiple projects, which involved producing top-notch code and providing guidance and mentorship to fellow developers. Furthermore, I supported the testing and service delivery teams in their efforts.

In more recent years, I have been involved in the development of a set of cutting-edge software applications for Health & Social Care, including Civica Prescribing - an Electronic Prescription Software, Drug Administration, and FHIR EPR Services.

These initiatives have made use of a variety of technologies, such as .NET (comprising a mix of EF/EF Core and ADO.NET), ASP.NET MVC, ASP.NET Core, REST services, MSSQL Server, as well as Javascript/Typescript.

My duties have also encompassed optimizing the performance of significant application areas to facilitate the handling of high volumes of data, ensuring that users have the best possible experience.

Owner

2014 -

Bitsource | Gdańsk

As a company owner, I proved to be a responsible partner who excelled in both team-oriented and individual work environments. I was responsible for designing, development and maintaining software. As a business owner and lead developer, I further improved my problem-solving, communication, and leadership skills that is valuable asset in my role.

Software Developer (Part time)

2013 - 2014

Civica UK | Manchester

As a junior developer, I continued my work on ParisConnect to support the handling of additional business requirements for an expanding customer base. My daily tasks included analyzing business requirements, designing XSD/XML message schemas, and writing complex logic in C# and PL/SQL to support various use cases. Through this experience, I developed strong analytical and problem-solving skills, which were essential in delivering effective solutions to meet the evolving needs of our customers.

Student Placement Year

2012 - 2013

Civica UK | Manchester

During my student placement year, I dedicated 12 months to developing an integration framework called ParisConnect. This experience allowed me to enhance my skills in .NET (C#), Oracle PL/SQL, ADO.NET, and XML. The result of my efforts was a WCF service that enabled seamless integration between Civica Electronic Patient Record software (Paris) and third-party providers. Through this experience, I honed my problem-solving and software development skills, which was crucial for my further career.
